# Package 'statquotes'

October 6, 2018
Title Quotes on Statistics, Data Visualization and Science
Version 0.2.2
<b>Description</b> Generates a random quotation from a data base of quotes on topics in statistics, data visualization and science.
<b>Depends</b> R (>= $3.2.5$ )
License GPL (>= 2)
Encoding UTF-8
LazyData true
Maintainer Michael Friendly <friendly@yorku.ca></friendly@yorku.ca>
<pre>BugReports https://github.com/friendly/statquotes/issues</pre>
Imports stringr, tidytext, wordcloud
RoxygenNote 6.0.1
NeedsCompilation no

R topics documented:
quotes
quote_cloud
quote_topics
search_quotes
statquote
Index 6

quote\_cloud

quotes	Quotes on statistics, data visualization and science

#### **Description**

A data frame with over 200 quotations. The variables are:

## Usage

```
data(quotes)
```

#### **Format**

A data frame with 231 rows and 5 variables

#### **Details**

- qid quote ID, a numeric vector
- topic main topic, a factor with levels Computing Data Data visualization History Reviews Science Statistics Unclassified
- subtopic sub topic, a factor with levels Averages Box quotes Counts Design Ellipses Generalizations Milestones Pictures Tables Tidy data Time Tukey quotes
- text text of the quote, a character vector
- source source of the quote, a character vector

quote_cloud	Function to generate word cloud based upon quote database

## Description

This function takes a search pattern (can use regular expressions) and generates a word cloud based upon that filter.

#### Usage

```
quote_cloud(search = ".*", max.words = 80, colors = NA, ...)
```

## Arguments

search	A character string; used to search the database. Regular expression characters are allowed. Default is to search all quotes.
max.words	Logical; designate maximum number of words to be plotted.
colors	A character vector pertaining to the colors to be used to designate word frequency. The default is 5 levels, from light to dark green.
• • •	additional arguments passed to search_quotes and wordcloud

quote\_topics 3

#### Value

A wordcloud is plotted.

#### See Also

```
statquote, quote_topics, quotes, search_quotes. wordcloud
```

#### **Examples**

```
quote_cloud()
quote_cloud(search = "graph")
quote_cloud(max.words = 10)
```

quote\_topics

List the topics of the quotes data base

#### **Description**

List the topics of the quotes data base

#### Usage

```
quote_topics(subtopics = FALSE)
```

## Arguments

subtopics

logical; if TRUE the subtopics are printed as well with the associated topic

### **Examples**

```
quote_topics()
quote_topics(TRUE)
```

search\_quotes

Function to search quote database

#### **Description**

This function takes a search pattern (can use regular expressions) and returns all quotes that match the pattern. If fuzzy is FALSE, then only exact matches are returned (case sensitive).

## Usage

```
search_quotes(search, fuzzy = FALSE, fields = c("topic", "subtopic", "text",
    "source"), ...)
```

4 statquote

#### **Arguments**

search	A character string, used to search the database. Regular expression characters are allowed.
fuzzy	Logical; If TRUE, the function uses agrep to allow approximate matches to the search string.
fields	A character vector pertaining to the particular fields to search. The default is to search everything: 'c("topic", "subtopic", "text", "source")'.
	additional arguments passed to agrep to fine-tune fuzzy search parameters.

#### Value

A data frame (also with class 'statquote') object containing all quotes that match the search parameters.

#### See Also

```
agrep, statquote, quote_topics, quotes
```

#### **Examples**

```
search_quotes("^D") # regex to find all quotes that start with "D"
search_quotes("Tukey") #all quotes with "Tukey"
search_quotes("bad answer", fuzzy = TRUE) # fuzzy match

# to a data.frame
out <- search_quotes("bad answer", fuzzy = TRUE)
as.data.frame(out)</pre>
```

statquote

Function to display a randomly chosen statistical quote

#### Description

This function displays a randomly statistical quote from a collection. The quotations are classified by topics

#### Usage

```
statquote(ind, topic = NULL, source = NULL)
## S3 method for class 'statquote'
print(x, width = NULL, ...)
## S3 method for class 'statquote'
as.data.frame(x, row.names = NULL, optional = FALSE, ...)
```

statquote 5

## Arguments

ind	Optional index of a quote; if missing a random value is sampled from the available quotations.
topic	A character string, used to select a subset of the quotes based on the assigned topics.
source	A character string, used to select a subset of the quotes based on the source for the quote.
x	object of class 'statquote'
width	Optional column width parameter
	Other optional arguments
row.names	see as.data.frame
optional	see as.data.frame

## Value

A character vector containing one randomly selected quote from the included data set. It is of class statquote for which an S3 print method will be invoked.

fortune

## **Examples**

```
set.seed(1234)
statquote()
statquote(source="Tukey")
statquote(topic="science")
statquote(topic="history")
```
