Package 'tidymodels'

October 7, 2018

Title Easily Install and Load the 'Tidymodels' Packages

Version 0.0.1

Description The tidy modeling ``verse'' is a collection of package for
modeling and statistical analysis that share the underlying design
philosophy, grammar, and data structures of the tidyverse.

R topics documented:

---

pkg_deps	*List all dependencies*

Description

List all dependencies

Usage

```
pkg_deps(x = "tidymodels", recursive = FALSE)
```

Arguments

x	A character string for the packages being evaluated.
recursive	If TRUE, will also list all dependencies of tidymodels packages.

---

tag_show	*Facilities for loading and updating other packages*

Description

'tidymodels' contains a set of tags for specific topics in modeling and analysis. These can be used to load packages in groups.

Usage

```
tag_show()

tag_attach(tag)

tag_update(tag)
```

Arguments

tag	A character strong for the tag. Current options are 'Bayesian analysis', 'deep learning', 'feature engineering', 'parallel processing', 'resampling', 'text analysis', and 'time series'.

Examples

```
tag_show()
```

tidymodels_conflicts	*Conflicts between the tidymodels and other packages*

Description

This function lists all the conflicts between packages in the tidymodels and other packages that you have loaded.

Usage

```
tidymodels_conflicts()
```

Details

There are four conflicts that are deliberately ignored: `intersect`, `union`, `setequal`, and `setdiff` from dplyr. These functions make the base equivalents generic, so shouldn't negatively affect any existing code.

Examples

```
tidymodels_conflicts()
```

tidymodels_packages	*List all packages in the tidymodels*

Description

List all packages in the tidymodels

Usage

```
tidymodels_packages(include_self = TRUE)
```

Arguments

`include_self`   Include tidymodels in the list?

Examples

```
tidymodels_packages()
```

tidymodels_update	*Update tidymodels packages*

Description

This will check to see if all tidymodels packages (and optionally, their dependencies) are up-to-date, and will install after an interactive confirmation.

Usage

```
tidymodels_update(pkg = "tidymodels", recursive = FALSE, ...)
```

Arguments

pkg	A character string for the model being updated.
recursive	If TRUE, will also check all dependencies of tidymodels packages.
...	Extra arguments to pass to [utils::install.packages()]

Value

Nothing is returned but a message is printed to the console about which packages (if any) should be installed along with code to do so.

Examples

```
## Not run:
tidymodels_update()

## End(Not run)
```
